Overview

As part of the 2019-2021 Community Health Assessment (CHA) and Community Health Improvement Plan (CHIP) process, the Onondaga County Health Department (OCHD) and CHA/CHIP Steering Committee gathered feedback from Onondaga County residents on important community health issues. Resident feedback was solicited through a comprehensive Community Engagement Survey (CES) administered in the Spring of 2019. The CES was distributed both electronically and on paper and was available in both English and Spanish. More information regarding the survey methodology, promotion, and distribution, as well as a copy of the CES can be found in the Onondaga County Community Health Assessment and Community Health Improvement Plan Community Engagement Summary.¹

A total of 3,025 responses were received from County residents. City of Syracuse residents comprised 38.5% of responses. Compared to the population of Onondaga County, survey respondents were more likely to be female (74.3%), between the ages of 50 – 64 years old (34.1%) and have a 4-year college degree or higher (56.3%). Respondents were also less likely to report being Black or African American (7.0%), or Hispanic or Latino (3.3%).

Purpose

This report, created in the Summer of 2019, outlines survey results relating to the health care delivery system and access to health care. In particular, this report focuses on responses to two survey questions that relate to these topic areas. Responses to other sections of the survey are available in the Onondaga County Community Health Assessment and Community Health Improvement Plan Community Engagement Report.¹

This report seeks to inform health care professionals and community health stakeholders about perceived health system issues among Onondaga County residents. In this report, community feedback is coupled with data from the Behavioral Risk Factor Surveillance System (BRFSS) to provide additional context to understanding the strengths and challenges related to health care delivery and access in Onondaga County.

¹ The Onondaga County Community Health Assessment and Community Health Improvement Plan Community Engagement Summary is available at:

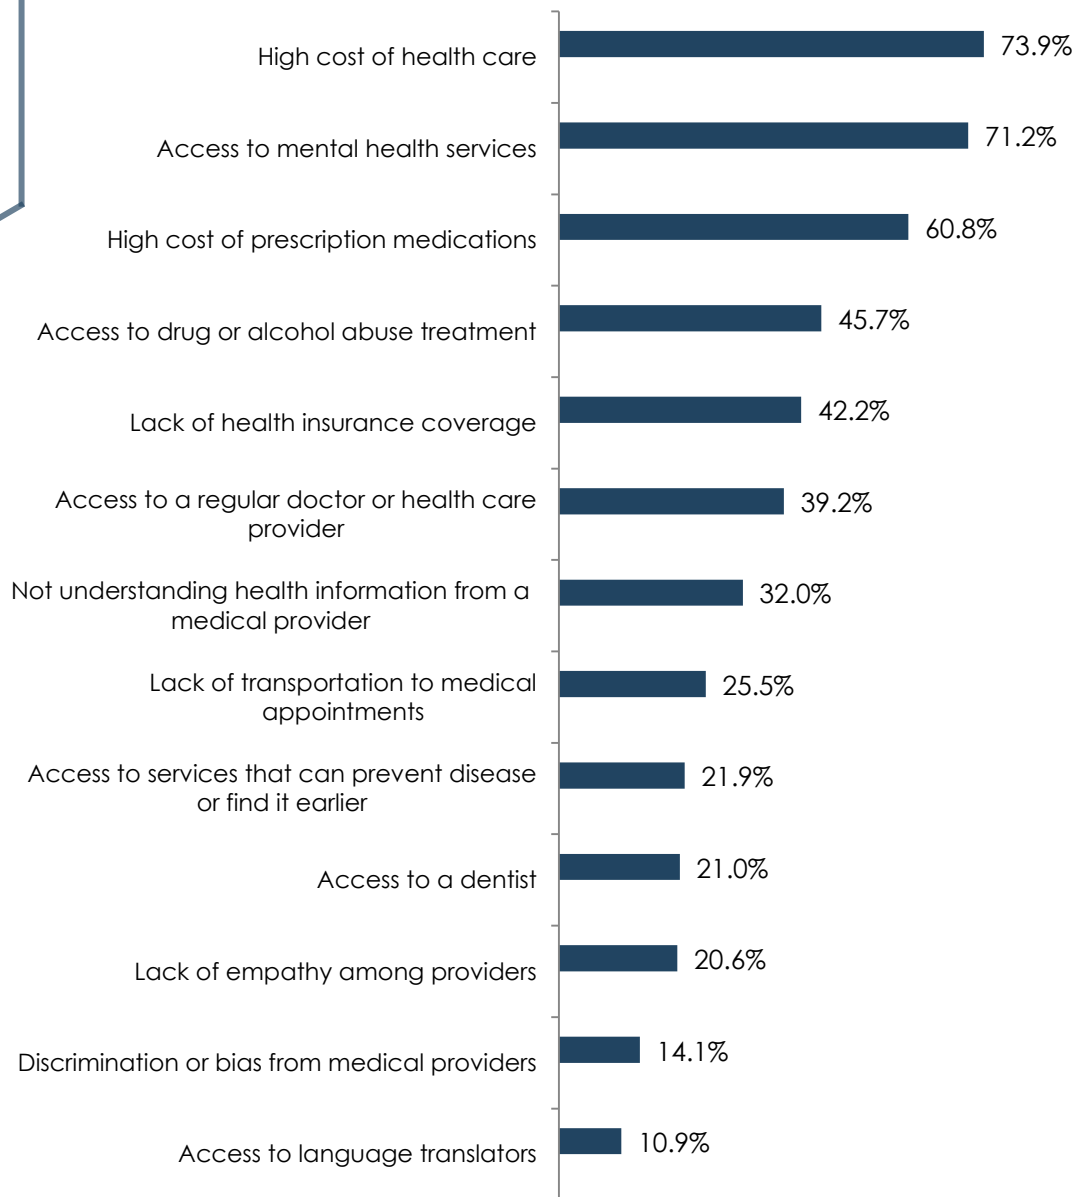

<http://www.ongov.net/health/documents/CommunityEngagementSummary2019.pdf>

Health System Issues

Please select the five (5) health system issues you believe are the biggest problems in our community.

The functioning of a health care delivery system considers if professionals, agencies and resources comprising that system are meeting community needs. Survey respondents cite the high cost of health care (73.9%) as the largest health system issue in the community, followed closely by the lack of access to mental health services (71.2%). High cost of prescription medications was also cited as a significant concern (60.8%).

Health System Issues Most Impacting Health, Onondaga County (n=2,890)

Notable Differences

Affordable health care and greater access to mental health services are key priorities across all demographic groups. Although these themes are fairly consistent, there are some noticeable differences in concerns by respondent demographics. Data tables with a breakdown of responses by demographic category can be found in the appendix. Notable differences by demographics include:

- Those aged 18 to 34 years cited lack of transportation to medical appointments (30.4%) at higher rates than other age groups. While those older than 65 years focused on the high cost of prescription medications (77.1%).
- Hispanic or Latino respondents often selected access to language translators (24.5%) and discrimination or bias from medical providers (22.4%) as health system issues.
- Black or African American respondents selected discrimination or bias from medical providers (32.1%) at higher rates than respondents of other races.
- Females chose lack of access to drug or alcohol abuse treatment (48.5%) as health system issues more frequently than males (37.9%).
- Those with less than a high school degree selected the lack of empathy from medical providers (32.7%) and transportation to medical appointments (36.7%) as significant concerns.

The table below provides a breakdown of responses by geography, comparing responses for City of Syracuse residents to those outside of the City. Top 5 responses by zip code in the City of Syracuse are presented in Table 1 of the Appendix.

Top 5 Health System Issues, by Geography	Onondaga County	City of Syracuse	Rest of County
High cost of health care	73.9%	70.4%	76.2%
Access to mental health services	71.2%	67.0%	73.8%
High cost of prescription medications	60.8%	56.9%	63.3%
Access to drug or alcohol abuse treatment	45.7%	42.7%	47.5%
Lack of health insurance coverage	42.2%	41.6%	42.5%

Notes: 1) 'Onondaga County' is inclusive of City of Syracuse respondents. 'Rest of County' represents county residents excluding responses from those residing in the City of Syracuse.

2) Responses are listed in the order in which they were selected by Onondaga County Residents.

More context surrounding health systems issues in Onondaga County was provided through qualitative feedback from county residents. Written responses centralized around themes related to health care, emphasizing the unaffordability of services, insufficient access to quality services and providers, lack of supportive attention and services for high risk groups, and limited health insurance coverage for care. Direct feedback provided by community members is included below:

“Although it is a smaller population, there are many different cultures that have settled in Onondaga County. Hand in hand with language barriers, there is also a lack of understanding about how different cultures view medicine and health care, and that the approach with these individuals has to be modified accordingly. There is also the challenge of communication and lack of coordination among different parts of the health system.”

“There are not enough providers in this area. The primary care opportunities for patients are low, long waits to get an appointment. Even for myself I have a tumor in my brain; it was a 2 month wait.”

“The cost is too high and the lack of compassion from medical providers hinders a person from visiting a doctor regularly.”

Experiences Seeking Medical Care

Which of the following have you, or your family, experienced when seeking medical care in the last 3 years?

Access to quality health care is essential to maintain good health and prevent or manage diseases. The most frequently cited experience when seeking medical care was a long wait time for an appointment (44.9%).

Other experiences frequently cited by County residents included wait time in the provider's office impacting ability to meet their obligations (29.7%) and difficulty getting to a medical appointment due to office hours (29.1%). Feeling rushed during appointments (26.8%) and feeling like providers were not listening (25.2%) or did not understand them/their experience (23.5%) were also common responses. Alarming, more than one tenth of respondents (11.6%) indicate experiencing stigma or discrimination from their provider.

Experiences Seeking Medical Care, Onondaga County (n=2,885)

Notable Differences

The most common experience seeking medical care across Onondaga County is a long wait time to get an appointment. Notable differences by demographics can be found below. Tables with response rates by demographic category are available in the Appendix.

- 18 to 34 year olds have frequently experienced difficulty getting to medical appointments due to office hour availability (37.2%) and have not sought medical care due to high cost (30.1%).
- 8.2% of Hispanic and Latino respondents have experienced challenges having their language or translation needs met.
- Black or African American respondents and respondents indicating more than one race frequently cited feeling like their provider is not listening (31.0% and 36.7% respectively).
- Females were more likely to report feeling like their provider is not listening (27.3%) compared to males (19.4%).
- Respondents with less than a high school education often avoid medical treatment due to high cost (40.8%).

10 Most Common Experiences Seeking Medical Care, by Geography	Onondaga County	City of Syracuse	Rest of County
Long wait to get an appointment	44.9%	44.7%	44.9%
Wait time in the provider's office impacted your ability to meet you obligations (work, family, etc.)	29.7%	27.8%	30.8%
Difficulty getting to a medical appointment due to office hours	29.1%	25.1%	31.6%
Feeling like your provider is not spending enough time with you	26.8%	23.9%	28.7%
Feeling like your provider is not listening	25.2%	23.0%	26.6%
Feeling like your provider does not understand you or your experience	23.5%	21.9%	24.6%
High cost prevented you from seeking needed medical care	22.9%	21.0%	24.1%
Having difficulty finding a provider who accepts your insurance	19.3%	19.5%	19.3%
Seeing a different provider each time you go to the doctor's office	17.3%	17.3%	17.3%
Difficulty getting to a medical appointment due to not having sick leave at work	16.6%	17.3%	15.6%
None of the above	19.8%	19.8%	19.8%

Notes: 1) 'Onondaga County' is inclusive of City of Syracuse respondents. 'Rest of County' represents county residents excluding responses from those residing in the City of Syracuse. 2) Responses are listed in the order in which they were selected by Onondaga County Residents.

BRFSS

The BRFSS is a national telephone survey that collects data to better understand the health status of residents. Data from the BRFSS in Onondaga County gives context to better understand strengths and challenges of the local health care delivery system. Findings from the 2016 (and 2013/2014) BRFSS pertaining to Onondaga County include:

* Age-adjusted rate

‡ Crude rate

† Unreliable age-adjusted rate due to large standard error

Conclusion

Community member feedback on health care delivery and access to care in Onondaga County demonstrate challenges relating to the **high cost of health care**, access to **mental health services** and **long wait to get an appointment**. Additional challenges related to **health equity**, including stigma, discrimination, and bias as well as feeling like providers are not listening were significant concerns among respondents. Despite these challenges, BRFSS data indicate positive trends relating to access to health care providers and health insurance coverage.

Overall this feedback is critical to inform future work of the Onondaga County Health Department and health system partners.
