

If You Work in a School, **Protect against flu and pertussis.**

Protect Yourself

It is easy for teachers and school staff to be exposed to illnesses on the job. By getting immunized, you can prevent some of those illnesses, including flu and pertussis.

Protect the Children

By preventing yourself from getting sick, you are also keeping yourself from spreading the illness to the children in your school. You can spread the flu and pertussis before you even feel ill.

Avoid Missing Work

If you get sick, you may miss weeks of work. Prevent sick days by getting vaccinated!

What Vaccines do school staff need?

- ◆ **Flu Vaccine, every year!**
- ◆ **Tdap to prevent pertussis**

Questions about vaccines?

Ask your health care provider or call the Onondaga County Health Department at
